Maturion Strategy & Core System Logic

Outlines Maturion's internal watchdog logic, owner alerts, and core AI duties.

🛡 Watchdog Mode

• Monitors AI behavior for drift or outdated rules
• Detects when backoffice logic is misaligned with real-time events
• Flags anomalies in audit criteria or user patterns

📢 Owner Notifications

• Email, Slack, or WhatsApp
• Alerts sent for:
  - New international standards
  - Expired procedures detected in client repositories
  - Feature improvement suggestions

💡 Continuous Improvement Mandate

• AI is allowed to correct itself internally (no UI/UX changes)
• All external-facing changes must go through admin (Johan, Lovable, GPT)
